

2010 Fall Ergonomics Seminars

Find It - Fix It - Learn It

Increase Productivity and Accelerate Health and Safety Excellence!

Learn to make simple and effective human performance improvements in the workplace with these open-enrollment training programs offered by Humantech's experienced ergonomists. Hands-on problem solving methods will help you recognize, evaluate, and control ergonomic risk.

Applied Industrial Ergonomics

This two-day course introduces a job improvement process integrating simple assessment tools, low-cost and high-impact solutions, and productivity improvements. The program is intended for health and safety professionals, ergonomics committees, and manufacturing engineers.

New!!!

Advanced Ergonomic Design Workshop

This new course is labeled "Workshop" for a reason. We take you beyond the identification and assessment of ergonomic risk, and head into "designing out" the risk in the first place. Through group activities and a unique simulation exercise, you'll learn specific design guidelines for workstations, tools, controls and displays, and manual material handling; how to apply ergonomics criteria to equipment design; and how to evaluate proposed and existing equipment. You'll have the opportunity to bring your own project materials for a hands-on case study. The workshop includes The Handbook of Ergonomic Design Guidelines, a \$385 value.

New!!!

User-Centered Design

Humantech is partnering with System Concepts to present this new course which will provide your organization with everything needed to put users at the heart of your design process. Whether your priority is human-computer interaction, industrial design, or the user experience you'll learn how to understand your users better and design products which are effective, efficient, and satisfying to use. User-centered design techniques will help you complete projects to time and budget, getting the maximum return from your investment.
